

# Hamilton Deed

## Client

Emerson Network Power

## Requirement

Provide full time health and safety consultant to oversee the new Facebook project together with a full time Swedish national to discharge the duties of the BAS-U for the project.

On the edge of the Arctic Circle, where the River Lule meets the Gulf of Bothnia, lies a very important building. Facebook's newest data centre - in Luleå, Sweden - is now handling live traffic from around the world. Phase 2 is currently under construction, with the final phase 3 being completed by the end of 2016.

Hamilton Deed is working with Emerson Network Power to assist them in taking over the role of General Contractor from Bravida. This requires providing two full time consultants on the site to manage the safety, one of whom is a BAS-U qualified local.

Specific areas covered by Hamilton Deed include:

- Onsite health and safety advice and consultancy
- BAS-U management
- Contractor vetting
- Full safety documentation review and provision if required
- Audit and inspection programmes
- Training
- Inductions
- Permits to work management
